ABSTRACTED-PUB-NO: EP 959461A

BASIC-ABSTRACT:

NOVELTY - Magnetic recording medium comprises alternate magnetic recording layers and nonmagnetic under layers coated on a nonmagnetic support, in which at least 1 layer contains a fatty acid ester compound having at least 1 side chain group of mol.wt. at least 70.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a method of manufacturing a magnetic recording medium, comprising successively coating a nonmagnetic under layer coating material and a magnetic recording layer coating material on a nonmagnetic support, in which at least 1 of the coated layers contains the fatty acid ester compound.

USE - The media are useful in high performance magnetic recording apparatus, e.g. for computers (particularly for large capacity, e.g. 100 Mb, 3.5 inch floppy disks), video or audio apparatus using tapes or cards, especially for high density, digital recording.
